DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/02/2008 has been entered.

Applicant's arguments with respect to claims 31-37 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Regarding Claims 38-43, the claims present the term "the computer readable medium", however, this term is no where to be found in applicant's specification as originally filed. Appropriate correction or clarification of that term is respectfully requested in order to advance prosecution of the current pending case.

Application/Control Number: 10/537,933 Page 3

Art Unit: 2618

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 31- 55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pettey et al (PGPUB-No: 2003/0014544) in view of Park et al. (PGPUB-No: 2002/0073322).

Regarding claim 31, Pettey teaches a data communications connection method for the Transmission Control Protocol (TCP) comprising the steps of: prior to the establishment of a TCP/IP connection an initiating party computer system sending a connection request message to a receiving party computer system (paragraphs 0069, 0107, see figures 3 and 8); receiving the connection request message at the receiving party computer system (paragraphs 61, 69, see figures 2 and 3); opening a TCP connection at the receiving party computer system (paragraph 58, figure 2) except for the initiating party computer system, and, communicating between the initiating and receiving party computer systems using TCP communication packets. However Park et al. teach the initiating party computer system, and, communicating between the initiating and receiving party computer systems using TCP communication packets (paragraph 14, lines 1-7, paragraph 15, line 1-7, paragraph 18, lines 6-14, paragraph 20, lines 8-15

). Therefore, it would have been obvious to one of ordinary skills in the art at the time of invention to modify the method of Nickels to include a connection has already been negotiated by the receiving party as taught by park in order to provide security system thereby improve more customer services.

Regarding claim 32, Pettey further teaches a data communications connection method according to claim 31, wherein the connection request message includes data on the connection requested (paragraphs 69, 107, see figure 3 and 8).

Regarding claim 33, Park further teaches a data communications connection method according to claim 31, wherein the connection request message includes information on the initiating party computer system (paragraphs 18, 20).

Regarding claim 34, Pettey further teaches a data communications connection method according to claim 31, further comprising: evaluating the connection request message at the receiving party computer system prior to opening a TCP connection (paragraphs 121, 123, see figures 12 and 13).

Regarding claim 35, Pettey further teaches a data communications connection method according to claim 34, wherein evaluating the connection request message includes authenticating data within the connection request message (paragraph 107, 123, see figure 12).

Regarding claim 36, Park further teaches a data communications connection method according to claim 34, wherein evaluating the connection request message includes authenticating the initiating party computer system (paragraph 14, lines 1-7, paragraph 15, line 1-7, paragraph 18, lines 6-14, paragraph 20, lines 8-15)

Regarding claim 37, Park further teaches a data communications connection method according to claim 34, further comprising negotiating an encryption key during evaluation (paragraphs 15, 23, see figure 3).

Regarding claim 38, Pettey teaches a computer-readable medium having computer-executable instructions for performing a data communications connection method for the Transmission Control Protocol (TCP) comprising the steps of: prior to the establishment of a TCP/IP connection an initiating party computer system sending a connection request message to a receiving party computer system (paragraphs 69, 107, see figures 3 and 8); receiving the connection request message at the receiving party computer system (paragraphs 61, 69, see figures 2 and 3); opening a TCP connection at the receiving party computer system (paragraph 58, figure 2) except for the initiating party computer system, and, communicating between the initiating and receiving party computer systems using TCP communication packets. However Park et al. teach the initiating party computer systems using TCP communication packets (paragraph

14, lines 1-7, paragraph 15, line 1-7, paragraph 18, lines 6-14, paragraph 20, lines 8-15). Therefore, it would have been obvious to one of ordinary skills in the art at the time of invention to modify the method of Nickels to include a connection has already been negotiated by the receiving party as taught by park in order to provide security system thereby improve more customer services.

Page 6

Regarding claim 39, Park further teaches the computer-readable medium of claim 38, wherein the connection request message includes information on the initiating party computer system (paragraphs 18, 20).

Regarding claim 40, Pettey further teaches the computer-readable medium of claim 38, further comprising computer-executable instructions for the step of evaluating the connection request message at the receiving party computer system prior to opening the TCP connection(paragraphs 121, 123, see figures 12 and 13).

Regarding claim 41, Pettey further teaches the computer-readable medium of claim 40, wherein evaluating the connection request message includes authenticating data within the connection request message (paragraph 107, 123, see figure 12).

Regarding claim 42, Park further teaches the computer-readable medium of claim 40, wherein evaluating the connection request message includes authenticating the initiating party computer system (paragraph 14, lines 1-7, paragraph 15, line 1-7,

paragraph 18, lines 6-14, paragraph 20, lines 8-15).

Regarding claim 43, Park further teaches the computer-readable medium of claim 40, further comprising computer-executable instructions for the step of negotiating an encryption key during evaluation (paragraphs 15, 23, see figure 3).

Regarding claim 44, Pettey teaches a communication connection system adapted to communicate under the Transmission Control Protocol (TCP), comprising: an initiating device adapted to send a connection request message prior to the establishment of a TCP/IP connection (paragraphs 69, 107, see figure 3); and a receiving device adapted to receive the connection request message (paragraphs 61, 69, see figures 2 and 3); open a TCP connection at the receiving device(paragraph 58, figure 2) except for the initiating device, and communicate with the initiating device using TCP communication packets. However Park et al. teach the initiating device, and communicate with the initiating device using TCP communication packets (paragraph 14, lines 1-7, paragraph 15, line 1-7, paragraph 18, lines 6-14, paragraph 20, lines 8-15). Therefore, it would have been obvious to one of ordinary skills in the art at the time of invention to modify the communication of Nickels to include a connection has already been negotiated by the receiving party as taught by park in order to provide security system thereby improve more customer services.

Regarding claim 45, Park further teaches the communication connection system of claim 44, wherein the connection request message includes information on the initiating device (paragraphs 18, 20).

Regarding claim 46, Pettey further teaches the communication connection system of claim 44, wherein the receiving device is further adapted to evaluate the connection request message prior to opening the TCP connection at the receiving device for the initiating device (paragraphs 121, 123, see figures 12 and 13).

Regarding claim 47, Pettey further teaches communication system of claim 46, wherein evaluating the connection request message includes authenticating data within the connection request message (paragraph 107, 123, see figure 12).

Regarding claim 48, Park further teaches the communication connection system of claim 46, wherein evaluating the connection request message includes authenticating the initiating device (paragraph 14, lines 1-7, paragraph 15, line 1-7, paragraph 18, lines 6-14, paragraph 20, lines 8-15).

Regarding claim 49, Park further teaches the communication connection system of claim 46, wherein the receiving device is further adapted to negotiate an encryption key with the initiating device (paragraphs 15, 23, see figure 3).

Regarding claim 50, Pettey teaches a communication connection system adapted to communicate under the Transmission Control Protocol (TCP), comprising: an initiating device adapted to send a connection request message prior to the establishment of a TCP/IP connection (paragraphs 69, 107, see figure 3); and a receiving device adapted to receive the connection request message (paragraphs 61, 69, see figures 2 and 3); open a TCP connection at the receiving device(paragraph 58, figure 2) except for the initiating device, and communicate with the initiating device using TCP communication packets. However Park et al. teach the initiating device, and communicate with the initiating device using TCP communication packets (paragraph 14, lines 1-7, paragraph 15, line 1-7, paragraph 18, lines 6-14, paragraph 20, lines 8-15). Therefore, it would have been obvious to one of ordinary skills in the art at the time of invention to modify the communication of Nickels to include a connection has already been negotiated by the receiving party as taught by park in order to provide security system thereby improve more customer services.

Regarding claim 51, Park further teaches the communication connection system of claim 50, wherein the connection request message includes information on the initiating device (paragraphs 18, 20).

Regarding claim 52, Pettey further teaches communication connection system of claim 50, wherein the receiving device is further adapted to evaluate the connection request message prior to opening the TCP connection at the receiving device for the initiating

Application/Control Number: 10/537,933 Page 10

Art Unit: 2618

device (paragraphs 121, 123, see figures 12 and 13).

Regarding claim 53, Pettey further teaches the communication connection system of

claim 52, wherein evaluating the connection request message includes authenticating

data within the connection request message (paragraph 107, 123, see figure 12).

Regarding claim 54, Park further teaches the communication connection system of

claim 52, wherein evaluating the connection request message includes authenticating

the initiating device (paragraph 14, lines 1-7, paragraph 15, line 1-7, paragraph 18, lines

6-14, paragraph 20, lines 8-15).

Regarding claim 55, Park further teaches the communication connection system of

claim 52, wherein the receiving device is further adapted to negotiate an encryption key

with the initiating device (paragraphs 15, 23, see figure 3).

Conclusion

The prior art made of record and not relied upon is considered pertinent to

Applicant's disclosure.
